

ASBESTOS ABATEMENT

Residential, Commercial &
Industrial Buildings

ASBESTOS hides where you least expect it... In your plumbing, thermal and HVAC components, process piping, transfer pipes and fittings, boilers, tanks, ducts, pipe wraps, insulation, gaskets, and vermiculite. You may also find it in your construction materials, joint compound, adhesive mastic, floor tiles, linoleum, plasters, cement products, transite siding shingles, concrete pipes, ceiling tiles, and asphalt roofing materials.

Asbestos is a naturally occurring mineral that was used in building materials and products for its fire, heat, and sound resistant properties. It has been found to cause serious health issues, including cancer-related illnesses. Asbestos is not banned and is still being used today in many building products and commodities today.

The AHERA-trained staff at CRAL Contracting Inc. provides state-of-the-art asbestos abatement for residential, commercial, and industrial buildings. *If you suspect asbestos in your building, office, or home...*
